GROUP II: Philosophy and Human Values

University of Calicut

Programme	**BA PHILOSOPHY HONOURS**					
Course Name	**PHILOSOPHY OF ARTIFICIAL INTELLIGENCE**					
Type of Course	**MINOR**					
Course Code	**PHL1MN 102**					
Course Level	**100-199**					
Semester	I	Credits			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical	Practicu	

					m	
		4				**60**
Brief description of the course:	This is a philosophy of artificial intelligence course, no knowledge in computer science or cognitive science will be presupposed, though any prior exposure to either can be an asset. This course will teach students how to think philosophically about artificial intelligence, at a high level of abstraction and from a certain distance from practice. The course aims at a concise introduction to the history and philosophy of AI, the Classical version of AI, Theories of artificial intelligence in Indian & Western and the ethical & philosophical implications of AI.					
Expected Course Outcome:	1. gain a foundation of knowledge in critical concepts of as well as theoretical approaches to artificial intelligence; 2. understand and critically review the recent history of thought about artificial intelligence; 3. identify the classical version of AI and disembodied intelligence; 4. understand theories of knowledge in artificial intelligence in Indian as well as Western perspectives; 5. identify and analyze ethical and philosophical implications of both artificial intelligence and our interaction with it; 6. This course also has a meta-goal, and that is to teach you how to integrate insights from philosophy and cognitive science while being critical of both;					
	1) Remember, 2) Understand, 3) Apply, 4) Analyze, 5) Evaluate, 6) Critical Thinking 7) Create (Course Outcome based on Bloom's Taxonomy)					

Module	Units	Course description	Hrs.	Marks.
1. INTRODUCTION TO ARTIFICIAL INTELLIGENCE	1.1	a) History and Foundations of Artificial Intelligence b) Can a machine think? c) Philosophy in the light of AI	**10 Hrs.**	**15**

2. CLASSICAL VERSION OF ARTIFICIAL INTELLIGENCE	2.1	Problems in the Classical model of AI: a) Alan Turing Test b) Chinese Room Experiment	**20 Hrs**.	**20**
	2.2	a) Descartes and the inception of Philosophy of Mind b) Disembodied intelligence		
3. THEORIES OF KNOWLEDGE IN ARTIFICIAL INTELLIGENCE	3.1	a) Buddhism b) Nyaya	**15**	**20**
	3.2	a) Identity theory b) Behaviourism c) Functionalism		
4. ETHICAL AND PHILOSOPHICAL IMPLICATIONS OF AI SYSTEM	4.1	a) How do we align the aims of autonomous AI systems with our own? b) Does the future of AI pose an existential threat to humanity?	**15**	**15**
	4.2	a) How do we prevent learning algorithms from acquiring morally objectionable biases? b) 4 How should AI systems be embedded in our social relations?		
	4.3	a) What sort of ethical rules should AI like a self-driving car use? b) Can AI systems suffer moral harm? And if so, of what kinds? c) Can AI systems be moral agents? If so, how should we hold them accountable?		
5. PHILOSOPHICAL UNDERPINNING OF AI AND THE FUTURE OF HUMANITY		Content and Evaluation Decided by the faculty	**10. Hrs.**	**10**

(Open Ended Module)				
Teaching and Learning Approach	**Classroom Procedure, (Mode of the transaction)** Socratic method, Lectures, discussion, Seminar presentations, Critical Response Paper, Collaborative reading.
