CHAPTER II

Elucidate the primary characteristics of Classical AI.

Examine the advantages and drawbacks of Classical AI.

Elucidate the function of symbolic representation in Classical AI.

3Contrast Classical Artificial Intelligence with Machine Learning.

Elucidate the contributions of John McCarthy to Classical Artificial Intelligence.

Elucidate the significance of the Dartmouth Conference in the evolution of Classical AI.

Examine the connection between Classical AI and the concepts proposed by Alan Turing.

The Turing Test evaluates mimicry rather than cognitive ability. Discuss.

Elucidate the philosophical ramifications of the Turing Test within the context of the philosophy of mind.

Assess the adequacy of passing the Turing Test as a criterion for machine intelligence.

Discuss the relevance of the Turing Test in the age of modern AI systems.

Detail the Chinese Room argument.

Discuss Strong AI criticism from the Chinese Room experiment.

Differentiate syntax and semantics using the Chinese Room.

Assess the Chinese Room argument's pros and cons.

Compare the Chinese Room argument to Alan Turing's Turing Test.

Consider the Chinese Room argument in current AI.

Explain Descartes' Mind–Body Problem.

Discuss the impact of Cogito, ergo sum on Philosophy of Mind.

Explain how Cartesian Dualism influenced current philosophy.

Explain Descartes' innate ideas hypothesis.

Assess Descartes' dualism's pros and cons.

Discuss how Descartes founded modern Philosophy of Mind.

Compare Descartes' mind theory to materialism.

Discuss Descartes' impact on AI and cognitive science

Can machines truly demonstrate disembodied intelligence?

Is human cognition completely independent of the body?

What are the benefits and drawbacks of the concept of disembodied intelligence?
